STOP RUINING THE EARTH

When we talk about climate change, we are talking about changes in weather and climate patterns. It is hard to watch TV and one fails to see news about climate change. Unfortunately, it's always bad news because the effects are adverse.

Man has dug his own grave by carrying out activities that have led to the greenhouse effect, such activities include; swamp reclamation so to construct infrastructures, farming and mining, deforestation to get fuel and building materials, inventing nuclear weapons with poisonous gases, industrialization and using fossils fuels. What could these activities bring apart from suffering and agony?

I am sure everyone has been affected either directly or indirectly by the effects of these merciless activities done against nature. Thousands of people are displaced by floods in just a day, imagine! And others starve due to a lack of food as a result of floods and droughts. What hurts me most is the fact that innocent people like children are suffering and dying due to the recklessness of the old. Now, where does our future lie?

Families in my community have at different times experienced famine caused by either late rains or heavy rains destroying all the crops. This has made many children drop out of school because they lack food to eat and can't concentrate in class while hungry. In addition, many families experience poverty because the little money they get is spent on buying food.

World economics, are collapsing because the expenditures are very high especially when handling disasters caused by climate change, and yet the income is also sabotaged.

I call upon governments, organizations, and every individual to stand up and act to protect the environment, do not wait for tomorrow, the time is now.
